

KickSecure Standard

Increased visibility into your threat landscape

In today's evolving digital landscape, cybersecurity threats are on the rise, with cybercriminals continuously refining their tactics. It's essential to closely monitor your digital infrastructure to protect your business effectively. KickSecure Standard offers a comprehensive solution, providing visibility and reporting for your cloud-based environments. This service provides advanced visibility into your cloud services, allowing you to understand and prioritise your cyber defences. By leveraging the latest in cybersecurity technologies, KickSecure Standard enables proactive threat detection and response, ensuring your business remains secure against emerging threats.

Why KickSecure Standard?

We developed KickSecure Standard to provide enhanced visibility for our existing support customers to empower them to understand the current security weaknesses and prioritising where to concentrate their resources. For businesses seeking a proactive approach to cybersecurity, KickSecure Standard offers the perfect blend of visibility, alerting, and intelligence.

Features and Benefits

/ Comprehensive Monitoring: KickSecure Standard constantly observes your system's configuration, ensuring alignment with evolving vendor recommendations and industry standards. By benchmarking against reputable organisations like CIS and Microsoft, we identify potential vulnerabilities that could be exploited by cybercriminals.

/ Proactive Alerting: We monitor for suspicious configuration changes, such as unusual administrative role assignments, which could indicate the onset of a cyber attack. Early detection allows for quick intervention, stopping attackers in their tracks before they can cause harm.

/ KickSecure Score and Monthly Reporting: Transparency is key to robust cybersecurity. Our monthly reports provide a detailed overview of your infrastructure's security posture, highlighting any gaps and recommending actionable steps for improvement. The KickSecure Score, a unique feature of our service, offers a concise metric to track your security progress over time.

Why choose Kick ICT?

KickSecure's service is a strategic choice for navigating cybersecurity complexities, offering proactive security management.
